

# StemEnhance™

## The first Stem Cell Enhancer

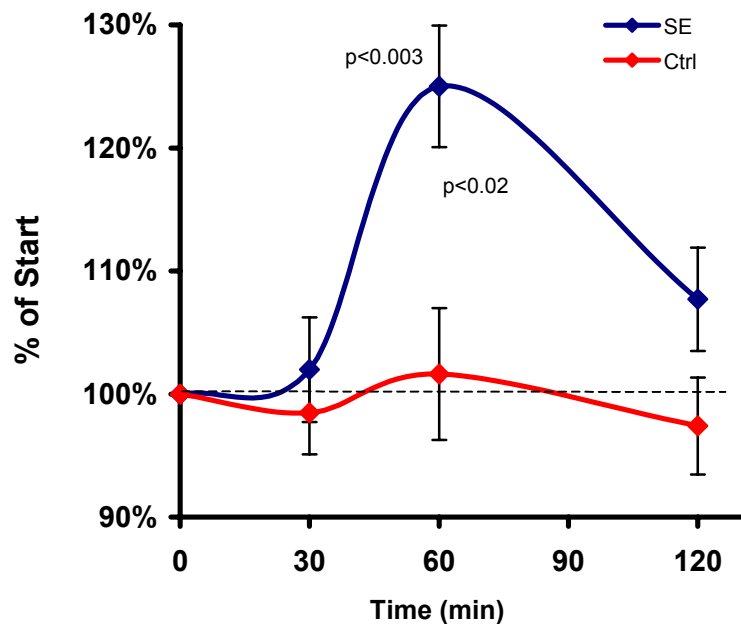

*Supports the natural release of stem cells from the bone marrow*

### Description

StemEnhance™ is a blend of two compounds extracted from the cyanophyta *Aphanizomenon flos-aquae* (AFA). These compounds are extracted using a proprietary process that utilizes no chemicals or harsh agents.

One extract, which contains an L-selectin ligand, supports the release of stem cells (CD34+ cells) from the bone marrow. The other extract, a polysaccharide-rich fraction named Migratose™, may support the migration of stem cells out of the blood into tissues.

Effectiveness of StemEnhance was demonstrated in a triple-blind study. Volunteers rested for one hour before establishing baseline levels. After the first blood samples, volunteers were given StemEnhance™ or placebo. Thereafter, blood samples were taken at 30, 60 and 120 minutes after taking the consumables. The number of circulating stem cells was quantified by analyzing the blood samples using Fluorescence-Activated Cell Sorting (FACS). Consumption of StemEnhance™ triggered a significant 25-30% increase in the number of circulating stem cells.

### Recommended dose

One gram of StemEnhance™ triggers an average 25-30% increase in the number of circulating stem cells. The effect lasts for a few hours. The recommended dosage is therefore 2 capsules once or twice day, at least 6 hours apart.
